GDEX ENVIRONMENTAL POLICY

GDEX ENVIRONMENTAL POLICY highlights the way GDEX leverages its express carrier business to build economic connectivity for its customers, to improve the living standards of its workers, and to contribute to the well-being of the community and the environment.

These are the value propositions that GDEX has identified and hope to enhance them continuously to benefit both the Group and the communities where we operate - values that are based on mutual respect for one another and the principles of accountability, transparency and integrity. Through these values, GDEX hopes to create a future that is sustainable and beneficial to all concerned.

We realized that we need to engage our stakeholders, customers and suppliers, employees as well as the community, and also take into consideration the conservation of the environment, in our activities.

This is because the Group's operations are inter-connected with the entire eco-system. How we carry out our activities, thus, determines our future and prospects. It is also about integrating responsibility with all the eco-system components and aligning it with business strategy.

The GDEX Environmental Policy is as below:-

We are committed to complying with legal and other requirements on environmental protection, preventing pollution to the environment, continually improving our environmental performance and upgrading our Environmental Management System.
